Materiel Common Operating Picture (M-COP)

- M-COP is a series of web-enabled dashboards provided by LOGSA to all Army formations.

- M-COP delivers actionable logistics readiness intelligence to enable commanders and staff to make readiness decisions to sustain the Fight to Win in a Complex World!

- Returning to a single document of record.

- Way Ahead:

  - More detail for tactical views (Brigade and below)

  - Predictive and prescriptive analytics for operational and strategic leaders

  - Tailored to enable decision-making

  - Ability to task organize Army units to meet operational requirements

LIN Visibility

SSA Health

Each M-COP Workbook, or dashboard, has an information dashboard that provides data sources, business rules and key questions addressed by the dashboard. There are also walkthrough dashboards that instruct the user to enhance the M-COP ease-of-use.

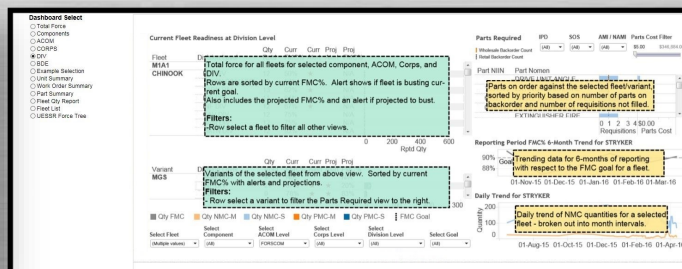

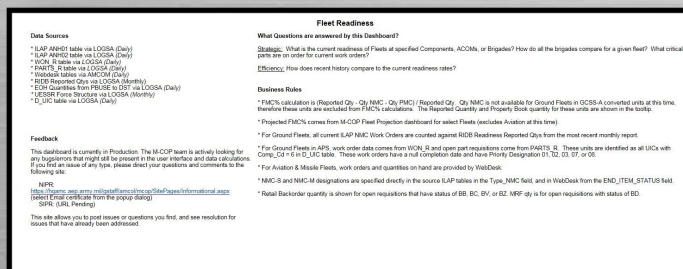

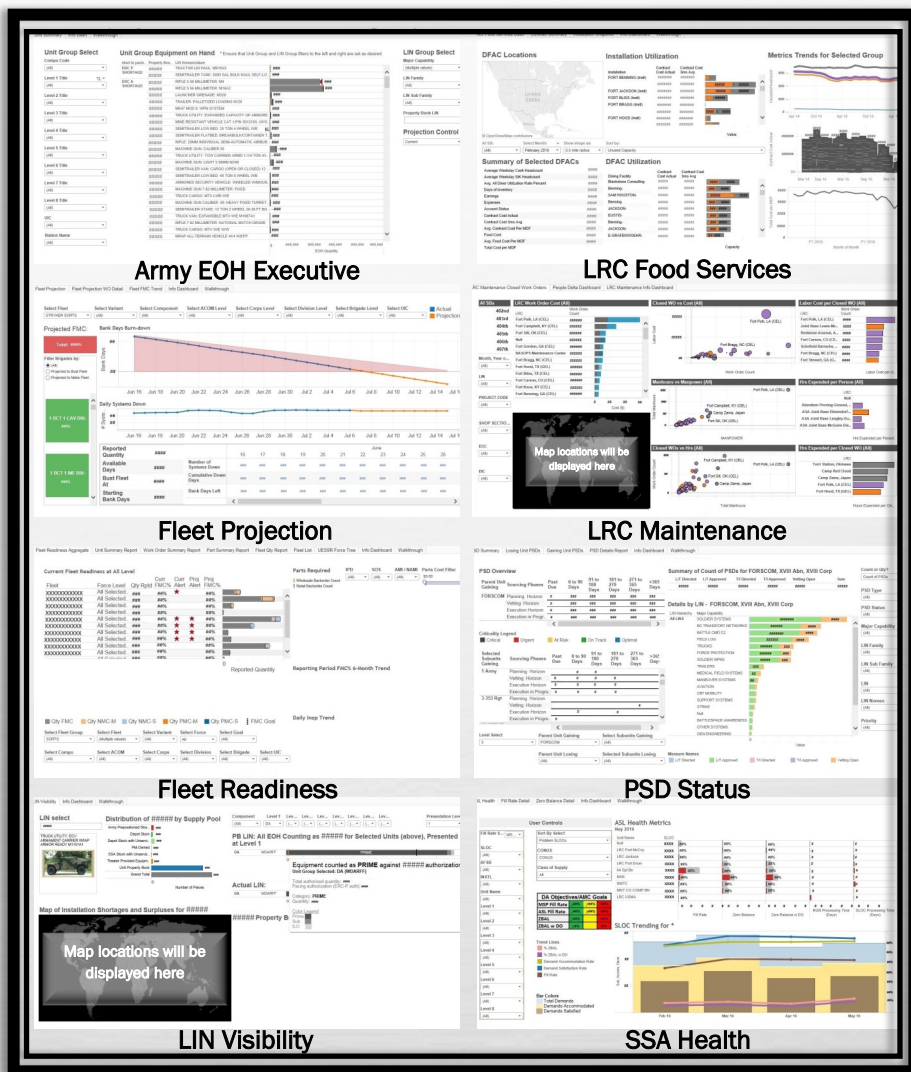

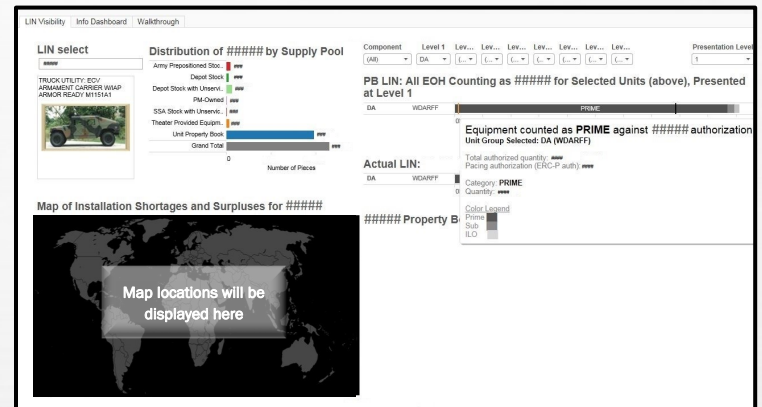

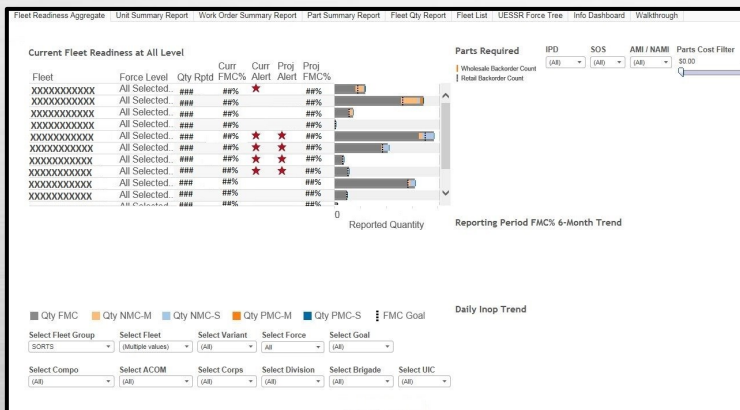

VISUALIZING ARMY READINESS!

M-COP Key Capabilities

Maintenance and Readiness dashboards give visibility of current and projected Fleet Readiness from Brigade Level up to Total Army, with details down to the work order, parts and document number levels.

Equipping and Supply dashboards give visibility of equipment on hand against authorizations, status of Proposed Sourcing Decisions (PSD) from the Lead Materiel Integrator Decision Support Tool (LMI DST), and monthly Supply Support Activity (SSA) performance metrics.

The Logistics Services workbooks cover capacity and utilization metrics at the Logistics Readiness Centers (LRC) for maintenance activities, dining facilities and non-tactical vehicles (NTV) to allow leaders to make critical decisions to minimize costs and maximize resources to contribute to Army Readiness.
